A Handbook on

xTrac

Application

Abstract

The need to enhance staff productivity and clients' patronage is on the rise and most companies are shopping for the best approach to meeting this target. In today's technology, supports have received a boost via phone, e-mail or an electronic ticket system. All of these define the role and tasks of a helpdesk agent.

In the same vein, it is understood that businesses' expense on technological resources that drive their operations is on the increase by the day. However, the challenge before most organizations is keeping track of these evolving assets as indicators for procurement planning without duplicating budgetary items. The need to accurately monitor the procurement processes, justification of the procurement items, in addition to taking inventory of the existing assets and effective analysis of assets usage, depreciation, return on investment, etc would serve as financial accounting guide for entrepreneurs or organizations who desire to take their businesses to the next level.

xTrac provides a common console for managing two solutions wrapped up in one. Combining all of the ITIL and ITSM policies on HelpDesk and ITAM, we deliver the right tool on the shelf for effective IT support and IT asset management. The key components of xTrac include:

- **Helpdesk**

Knowledgebase: This is a centralized repository where information is stored, organized, and then shared. In this case, it is streamlined to ensure staff and IT support can both access and acquire new knowledge or relevant skills about the technology driving the business. This is basically utilized as a platform for effective employees' collaborations, while also distributing the company knowledge and information internally, to enhance efficiency in terms of service of delivery.

Enterprise Incident Management System: Organizations need an improved and real-time support system that meets the defined MTTR, to reduce service downtime to the barest minimum. Get on the toll today with our enterprise incident management system module embedded in this application to put your support on-the-go. Use this to plan and engage prompt incident response and resolution time through our scheduled maintenance system. Start creating tickets, monitor and manage tickets from creation to closure.

Incident Resolution Procedural Archives: Certain incidents have occurred and reoccurred in most enterprises. Most times, incident resolution timeline becomes critical when such incident is prioritized high. To reduce the resolution time, access to previous documented resolution processes and results becomes necessary, and helps to save the possible impact of such incident on business at the minimum cost. With Resolution Archives, most incidents would be resolved internally at Tier 0, without escalating it to the next support plan.

Live Chat: Most staff and customers prefer Live Chat to any known conventional support platform, because support becomes fast, efficient, and convenient. Live Chat also enhances agent's productivity, and often bridges the gap between customers and service providers, helping them to build informed decisions.

ITAM

Examination and identification: Figuring out where you are and where you want to be within timeline is essential in Needs Assessment. The **Xtrac Application**'s approach to IT Assets Management is to enforce critical examination of assets during inventory exercise. Every question you need to ask in order to reveal your business needs and to make the right decision in terms of additional resources, new technologies, or market expansion is embedded in the application.

Data gathering and analysis: Built inside the application is intelligent data analysis and automatic technical recommendations based on each asset's current status. After a successful information gathering through proper and detailed inventory, such data is collated into the application's database for statistical and technical analysis.

Utilization: The essence of inventory is beyond taking a register of assets, but utilizing the results obtained from such analysis to make intelligent decisions, set priorities, evaluate options, compare cost-benefit then, create an action plan and implement it. It's always at this point that inventory exercise benefits a business and justifies its cost. The as-built intelligence in this application provides organizations an indicator that serves as smart guide towards taking the right direction.

Evaluation: Determining the extent to which an exercise, a decision, or implementation of an action plan has benefited or improved an organization is critical to the overall business process. Organizations are learning to evaluate the results of their needs assessment / gaps analysis. With xTrac Application, organizations can now evaluate the results of their action plan against the identified gaps, to measure the extent to which they have been able to close those gaps.

Budgeting and Procurement: You can create, review and update budget through the intelligence built into this application using the generated gap analysis report. Organizations can now use this platform to set appropriate Fiscal Year Baseline on each class of project, while creating an extended budgeting. Budget officers have considered this application as a smart approach to doing the job with the expected accuracy and speed. It has also aided the procurement officers in knowing what to procure within the premise of the outlined budget.

Accountability and Security of assets: Protecting assets from abuse and theft is one of the core objectives of Xtrac Applications in Asset Management. This creates a platform where requisition is made to the Asset Manager by the intending asset user seeking permission and awaits approval from the Asset Manager before access can be granted to such asset either for official use or maintenance.

This policy is embedded in the application to:

- **Engage Asset Users** with appropriate care in handling the assets and in the event of theft, loss or damage to assets, such incident must immediately be reported to the **Service Desk** or their supervisor, whose core task is to ensure that:
    - Asset Users are made aware of their responsibilities to protect and use the asset with appropriate care and to immediately report theft, loss or damage to the asset;
    - Assets are returned to the Asset Owner at the termination of employment, or at the end of a contract or assignment.
- **Protect organization's stock** through implementation of the security module built into the application. This works by ensuring that portable equipment are identified and fitted with barcode tags mounted at the security exit environment.

Objective of xTrac

The objective of xTrac Application is to ensure:

- A reduction in IT costs and incident resolution time
- Prompt self service delivery
- Organized Issue Tracking and Management
- IT efficiency and productivity
- Improvement in customer satisfaction
- IT Assets proper documentation and identification throughout the entire Asset lifecycle.
- Maintenance and renewal of IT Assets according to the defined asset specifications and expected life.
- Procurement Assets are in alignment with the organization's standards; where possible, to ensure maximum compatibility with existing systems and the provision of proper support through procurement validity check.
- The secure and safe disposal of assets in alignment with other policies defined by the organization.
- Timely Status Reporting, Gap Analysis, and Auto Recommendation

- Security and Accountability in terms of Assets management
- Accuracy of specification in Budget creation
- Effective Maintenance Schedule to keep track on proactive support system
- Project Analysis for Post Implementation Reviews
- Incident Management System

Benefits of xTrac

With the xTrac Application, organizations can:

1. Maximize the return on capital investment;
2. Reduce risks and increase efficiency of asset management, saving costs and administrative time;
3. Improve the accuracy of both financial reporting and compliances
4. Make effective decisions to improve overall organizational profitability and support growth.
5. Ensure proper accountability and safe custody of assets

Cost Breakdown

Brand	Description	Analysis	Cost of License per Module (N)
	SOFTWARE MODULES		
xTrac	Depreciation Module		985,500.00
	Stock Module	per annum	2,985,500.00
	Security Module		2,217,375.00
	Budgeting Module		2,094,187.50
	Procurement Module		2,862,312.50
	Help Desk Module		11,478,250.00
	ITAM Module		13,560,500.00
	IMPLEMENTATION COST		**Cost of Service (N)**
	Installation and Configuration		2,750,000.00
	Enterprise Hosting: On Cloud	per annum	2,250,000.00
	SSL Security		500,000.00
	HARDWARE REQUIREMENT		**Cost of Item (N)**
	Barcode Scanner		3,500,600.00
	Barcode Tags	subject to discussion	500,000.00
	Barcode Printer		700,000.00
	Barcode Generator		1,250,000.00
	Hewlett Packard Enterprise ProLiant DL380 Gen10 server Intel® Xeon® Gold 2.30 GHz 64 GB DDR4-SDRAM 2 TB Rack (2U) 800 W		5,590,690.00
	TRAINING		**Cost of Training Modules (N)**
	Tagging and Inventory		Subject to discussion
	Data Migration from Register to Database	Per annum	Subject to discussion
	Interpretation and Application of Results		Subject to discussion
	MAINTENANCE		**Maintenance Cost (N)**
	Routine Technical Support	per annum	2,500,000.00
		TOTAL	**49,774,315.00**
